2. Full Load Inductance (FLL) Test Parameters: 1.0MHz, 0.1Vrms, I ..., 25°C

3. Imm: DC current for an approximate temperature rise of 40°C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case operating
